

## **1.Title: “Easy Admission”.**

**2. Overview:** The last few months we have been working on an application. This application is a text based application. From here, students will be able to prepare admission forms for the university. And by using this application, the students will get rid of the extra cost of taking the form.

**3. Motivations:** We making this app, because we know that the remote rural areas of our country have not improved much. Therefore, the admissions candidates in these villages have to face various problems. As such they have to go far to pick up their admission form. There are many students who can't take admission form on time and cannot fill the admission form. Many students don't know when university's admission form collection date is started and when the admission form pick up date is over. This situation they have to face many problems. And that's why we will build up this Android based app.

**4. Related Works:** Worlds many country has some nearby similar software but most of them are not afford able or work of a particular operating system. But our software is fully deferent because it has available in all kind of Operating System just like IOS, Android, Harmony OS.

**5. Objectives:** This project will bring all university's information in one shed. From this app student can be able to take their admission from, and it will be able in whole country.

**6. How it will work:** Our project will be such that, we will be working on an Android App. That app will be published updated news from all public and private universities. In this this app, the student will know when to take exams of a university, and how much money needed to get the admission form. And from this app student can know when university will be finished the date of admission. We will be given a link to all the Varsity website in this app and with which the students can pick up the admission form. And all the information will be given on how much CGPA will be required for admission to a university.

## **7. Possible Challenges:**

**1.** Lack of trust.

2. Conflict and tension.
3. Not sharing information.
4. Low engagement.
5. Lack of transparency.
6. No long-term thinking.
7. Badly perceived, not delivering.
8. Poor change management.
9. Working in silos.
10. Not going in the same direction.

**8. Conclusion:** We know that there are still many villages in our country where technology is still far behind. Many of them do not have laptops in their hands, but they have to go far and wide to make admission forms but through this app they can also make the form on mobile phone. They will greatly benefit from using this app. So we are working on this app.
